DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10 and 15-19, drawn to a switching power supply with shielding for noise, classified in class 361, subclass 818.
- II. Claims 11-14, drawn to a wire wound antenna with coaxial cable attached, classified in class 333, subclass 243.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as products which share an alleged common utility of shielding noise but the common utility is not linked to a substantial structural feature. The products in this relationship are distinct if either or both of the following can be shown: (1) that the products encompass embodiments that are not required to perform the common utility or (2) that the products as claimed can be used to perform another utility. In this case, the products encompass embodiments that are not required to perform the common utility as evidenced by the different product to perform noise shielding as directed in claims 1 and 11. In claim 1, a conductive shield plate for preventing external transmission of noise generated by the at least one power device whereas in claim 2, a connecting wire comprising a ground line formed coaxially to a signal line are insulated from each other by a shield layer.
